

Maxam Tire Expands Rubber Track Lineup with New MT152 Track

Providing a solution to meet a wide range of challenging terrains

DANVERS, MA | August 26th, 2026

Maxam Tire is proud to announce the launch of the new MT152 Rubber Track, an enhanced Z-Lug design engineered to deliver exceptional traction, durability and extended service life for compact track loaders operating in demanding environments.

The MT152 builds upon the proven performance of traditional Z-Lug rubber tracks by combining aggressive traction with increased tread depth and a larger footprint to improve wear life without sacrificing performance. Designed for construction, site preparation and general earthmoving applications, the MT152 excels in loose ground conditions while providing stability and durability contractors depend on every day.

Engineered with a heavy-duty carcass, the MT152 delivers enhanced machine stability and long-lasting structural integrity under demanding workloads. Its stepped tread pattern promotes improved self-cleaning by allowing mud and debris to expel more efficiently, helping maintain consistent traction throughout the workday. A cut and tear-resistant tread compound further enhances durability in harsh operating conditions, while the increased tread depth and optimized net-to-gross ratio provide longer tread life and greater overall value.

“The MT152 was developed to give equipment owners aggressive traction and the durability they need to maximize uptime,” said Matt Fagan, Director of Research & Development at Maxam Tire. “By enhancing the traditional Z-Lug design with a deeper tread, larger footprint and reinforced carcass construction, we’ve created a rubber track that delivers outstanding performance, extended wear life and dependable operation across a wide range of challenging jobsite conditions.”
